

# Disable Developer Tool Window and Right Click

---

Implementation of [disable-devtool](#) library into OSSN. The disable-devtool disables all access to the devtools, preventing 'code porting' via the devtools

This library has the following features:

- Support configurable whether to disable the right-click menu
- Disable shortcut keys such as f12 and ctrl+shift+i
- Support recognition to open developer tools from browser menu bar and close the current page
- Developers can bypass the disable (url parameters are encrypted with tk and md5)
- Multiple monitoring modes, support almost all browsers (IE, 360, qq browser, FireFox, Chrome, Edge...)
- Highly configurable, minimalist to use, compact
- Identify the real mobile terminal and the browser developer tool to set the plug-in forged mobile terminal to save performance for the mobile terminal
- Support for identifying developer tools close events
- Support configurable whether to disable selection, copy, cut, paste function
- Support to identify eruda and vconsole debugging tools

## How to setup the options

After enabling the component, open the Disable Developer Tool option in the Config menu and set the options as you wish.

Dashboard Help View Site Premium Version Configure ▾

## DISABLE DEVELOPER TOOL

🔑 To enable Developer Tool functions temporarily, add in the end of URL of your site "[YOUR\_KEY]=[YOUR\_SECRET]". For example, if you key is "ossn" and your secret is "test", then you need add ?ossn=test at the end of URL

### Key

ossn

### Secret

test

- Disable the right-click menu
- Whether to clear the log every time
- Whether to disable selection text
- Whether to disable copying
- Whether to disable cutting
- Whether to disable paste

Save

## Limitations

The component was tested in OSSN 6.1 and 6.4, free and premium versions. Maybe some adjustments are required in older versions. In this case, **use at your own risk**.

## How to support

I'm releasing this component for free. But, if you want to help me to make more components, click on the button down below and [pay me a coffee](#). It's up to you how much coffee I'll drink ☺

 Buy me a coffee

## Version

- 1.2
  - Fixed loop when devtools is open before page load - #2
- 1.1
